Attempt : 1
Total Mark : 10
Marks Obtained : 10

Section 1 : Coding

1. Problem Statement

Develop a program using hashing to manage a fruit contest where each fruit is assigned a unique name and a corresponding score. The program should allow the organizer to input the number of fruits and their names with scores.

Then, it should enable them to check if a specific fruit, identified by its name, is part of the contest. If the fruit is registered, the program should display its score; otherwise, it should indicate that it is not included in the contest.

Input Format

The first line consists of an integer N, representing the number of fruits in the contest.

The following N lines contain a string K and an integer V, separated by a space, representing the name and score of each fruit in the contest.

The last line consists of a string T, representing the name of the fruit to search for.

Output Format

If T exists in the dictionary, print "Key "T" exists in the dictionary.".

If T does not exist in the dictionary, print "Key "T" does not exist in the dictionary.".

Refer to the sample outputs for the formatting specifications.

Sample Test Case

Input: 2
banana 2
apple 1
Banana
Output: Key "Banana" does not exist in the dictionary.

Answer

```
#include <stdio.h>
#include <string.h>

#define MAX_FRUITS 15
struct Fruit {
    char name[20];
    int score;
};

int findFruit(struct Fruit fruits[], int size, char *search) {
    for (int i = 0; i < size; i++) {
        if (strcmp(fruits[i].name, search) == 0) {
            printf("Key \"%s\" exists in the dictionary.\n", search);
            return 1;
        }
    }
```

```
    printf("Key \"%s\" does not exist in the dictionary.\n", search);
    return 0;
}

int main() {
    int N;
    scanf("%d", &N);

    if (N < 1 || N > MAX_FRUITS) {
        printf("Invalid number of fruits.\n");
        return 1;
    }

    struct Fruit fruits[MAX_FRUITS];

    for (int i = 0; i < N; i++) {
        scanf("%s %d", fruits[i].name, &fruits[i].score);
    }
    char search[20];
    scanf("%s", search);
    findFruit(fruits, N, search);

    return 0;
}
```

Status : Correct ***Marks : 10/10***
